THE ALUMINIUM COLLECTION

Aluminium windows & doors

A guide to choosing windows, sliding doors, bifolds and entrances for your home.

Slim aluminium sliding doors between a living room and terrace.

INSTALLED BY AWINDOW

LONDON & SURROUNDING AREAS

01 / SLIDING DOORS

Four ways to open the view.

Start with how you want the opening to work. Compare the centre profiles, side frames and threshold as you would see them after installation.

COR Vision

View system

20 mm centre profile

Manual sliding. A slim central meeting section gives the original COR Vision its distinctive look.

COR Vision Plus

View system

Larger glazing or motorisation

Manual or motorised sliding with a 25 mm centre profile. Consider it for larger glazed panels.

COR Vision Evolution

View system

Concealed sash

The sash is concealed from the front. The system has a 25 mm centre profile and a dedicated rotating closure.

Cortizo 4700

View system

Two operating versions

Choose between in-line sliding and lift-and-slide, then review the track and threshold for your opening.

White Cortizo 4700 installed by aWindow.

Compare the complete opening

Panel size, weight, glass and the opening arrangement affect which options are available. Ask for the track and threshold detail for your chosen layout.

02 / WINDOWS, DOORS, GLASS AND FINISH

Choose the details you'll live with.

Plan which windows should open, how you'll step into the garden and where you need privacy. Then choose the frame, glass and finish for each opening.

Replacement bay window at The Moorings.

The Moorings rear glazing during renovation.

Windows

Choose opening and fixed panes for ventilation and views. Compare the look of a visible or concealed sash.

Explore aluminium windows

Garden and entrance doors

Bifold leaves stack to the side. Sliding leaves move along a track. For an entrance, consider how the door and any sidelights fit the façade.

Explore aluminium doors

Glass

Tell us which rooms need help with heat loss, bright sun, outside noise or privacy. We'll review the glass alongside the selected frame.

Explore glazing options

Finish and hardware

Review powder-coated or anodised options for the chosen system. Compare physical samples and consider handles alongside the frame finish.

03 / GETTING A QUOTE

What to send for a quote.

A few photos and approximate measurements are enough to start. Send drawings if you have them and tell us which choices you'd like help with.

01

Property and postcode

Include your postcode, property type and the stage of the project.

02

Photos, drawings and sizes

Send inside and outside views or elevations. Add approximate width and height for each opening.

03

How each opening should work

Mark which panes open, where doors should stack or slide, and which door you'll use most.

04

Glass, finish and floor levels

Flag priorities such as glare, privacy or noise, and share any threshold or floor-level drawings.

05

Installation and access

Tell us whether you need supply or installation, when you need it and how we can access the openings.

We'll review your brief and explain what needs to be confirmed at survey before the specification is agreed.
